PROFESSIONAL SUMMARY

Java Backend Developer with 5+ years across backend development, production support, and quality engineering. Currently own claims **Spring Boot** microservice on a health-insurance claims platform processing 2,000 claims per day — covering the claim transaction lifecycle, **Redis** and HTTP caching, **JPA** query optimization. Strong across **REST API design**, transaction management, relational databases (**PostgreSQL, ORACLE**), and diagnosing production defects under live load.

EXPERIENCE

- **Software Developer**, *Consint Solutions Private Limited*, Noida, Uttar Pradesh, India *August 2025 - Present*
 - Own claims **Spring Boot** microservice — on a health-insurance TPA platform serving 500+ TPA users, delivering the claim transaction lifecycle (Inward, Intimation, Pre-Authorization, Cashless, Reimbursement, Pre/Post-Hospitalization, Domiciliary, Deductions, OPD, Health-Checkups and Critical Illness) for 70,000 providers.
 - Worked on product microservice for plan, policy, member configuration with **Spring Data JPA** and **PostgreSQL**.
 - Redesigned the **Balance Sum Insured blocking engine**, replacing an unreliable in-memory calculation with transactional SQL-backed ledger queries and correcting double-deduction and in-flight-claim errors in approval validation — eliminating a class of over-approval defects in production.
 - Architected a **Redis** caching layer for the master-data service with isolated fallback to the database and a client timeout cut from 60s to 2s so a cache outage degrades to normal performance instead of 5xx errors.
 - Cut latency on the highest-traffic dashboard queries by rewriting **JPA Specification** predicates — removing **lower()**-forced full scans and switching **LIKE** filters to equality on indexed columns — and restructuring result ordering and grouping.
 - Resolved production instability across both services: converted a blocking downstream dispatch to an **@Async** transactional path, fixed **connection-pool exhaustion** by tuning **HikariCP** sizing with leak detection, and eliminated **OutOfMemoryError** and pagination failures on high-volume listing endpoints.
 - Built **Apache POI** bulk-upload and dynamic export pipelines for policy, plan, inwards and member workbooks — adding header and schema validation that rejects malformed files at the API boundary rather than mid-transaction, and reflection-driven column mapping that removed hand-maintained header definitions as the schema evolved.
- **Systems Engineer (Java Backend)**, *Tata Consultancy Services*, Gurugram, Haryana, India *October 2023 - March 2025*
 - Diagnosed and resolved production defects in **TCS BaNCS** (core banking and insurance platform) as part of the Java backend team, working across distributed services and **Oracle DB**.
 - Reduced turnaround on high-priority incidents by through systematic log analysis, Java service debugging, and root-cause isolation across tickets.
 - Partnered with development, release, and client teams to ship targeted backend fixes with minimal downtime in a regulated banking environment.
- **Test Engineer**, *Veative Labs Private Limited*, Noida, Uttar Pradesh, India *November 2022 - April 2023*
 - Validated **REST APIs** using **Postman** and verified backend data integrity against SQL databases, running end-to-end feature verification alongside development and product teams.
- **Software Engineer (QA)**, *EasyGov Surajya Services Limited*, Noida, Uttar Pradesh, India *June 2020 - June 2022*
 - Built automated **API regression suites** in **Postman** for the Super Admin tool, cutting manual validation effort per release by achieving complete automation.
 - Improved stability of a citizen-facing web application through functional, regression, and **API testing** with backend data verification.

TECHNICAL SKILLS

Languages: Java, C++

Backend: Spring Boot, Spring MVC, Spring Data JPA, Hibernate, Spring Cloud Gateway, Spring Cloud Config, REST APIs, Microservices, Apache POI

Databases: PostgreSQL, Oracle

Caching & Messaging: Redis, HTTP Caching (ETag, Cache-Control), Apache Kafka

Architecture & Design: Microservices, API Gateway, Service Discovery (Eureka), Transaction Management, JWT, OAuth2, Role-Based Access Control

DevOps & Cloud: Docker, Docker Compose, Jenkins, GitHub Actions, AWS (EC2, RDS, ECR, S3, IAM), Google Cloud Platform (Compute Engine), Oracle Cloud Infrastructure, GHCR

Frontend: Angular, NgRx, RxJS, React, Tailwind CSS, HTML5, CSS3

Testing & Quality: JUnit, TDD, Postman, API Automation, Log Analysis, Root Cause Analysis, Production Support

Tools & Methods: Git, GitHub, Maven, JIRA, Agile / SCRUM

PROJECTS

•Ranker – Maths Test Platform

Live / Ongoing

Angular, NgRx, Spring Boot, Spring Cloud Gateway, PostgreSQL, Docker, GitHub Actions, GCP

ranker.co.in

- Building a full stack ed-tech platform for authoring mathematical problems, assigning mock tests, and grading, with an **Angular** + **NgRx** front end and a WYSIWYG maths editor (**MathLive**) that lets teachers author questions without writing LaTeX.
- Implemented **Google OAuth** sign-in and **role-based access control** across STUDENT, TEACHER, and ADMIN roles using route guards and role-specific UI flows.
- Architected the backend as **Spring Boot** services behind a **Spring Cloud Gateway** with **PostgreSQL** persistence and **Docker Compose** orchestration, developed **test-first (TDD)** with a failing test before every implementation change.
- Automated end-to-end deployment with **GitHub Actions**, shipping the containerized stack to **Google Cloud Platform** (Compute Engine) on every merge, with self-hosted **PostgreSQL** on persistent volumes — running live at ranker.co.in.

•Drill – The Lifestyle App

Live / Ongoing

React, Spring Boot, Apache Kafka, Eureka, Docker, Jenkins, Oracle Cloud

drillweb.co.in

- Designed a **Spring Boot microservices** platform with **API Gateway**, **Eureka** service discovery, and event-driven inter-service communication over **REST** and **Apache Kafka**.
- Built the **React** web client consuming gateway APIs with **JWT authentication** and role-based routing, plus a native **Android** client against the same APIs.
- Automated builds and deployments through **Jenkins** pipelines publishing images to **GHCR** and deploying to **Oracle Cloud** instances over private VCN networking.

ACHIEVEMENTS

Solved **1000+** **Data Structures and Algorithms** problems across **CSES** and **Codeforces**, building strong fundamentals in algorithmic problem solving.

EDUCATION

•B.Tech, Computer Science and Engineering, *University of Petroleum and Energy Studies*, Dehradun, India

July 2016 - May 2020
